**Note:** Again this Nine Palaces reading must take into consideration the vicinity topography. To determine the right direction is important and this is not too difficult to dictate. The incoming of water elements as well as the mountain surrounding the site should have a much bigger impact.

**Note:** Again this Nine Palaces reading must take into consideration the vicinity topography. To determine the right direction is important and this is not too difficult to dictate. The incoming of water elements as well as the mountain surrounding the site should have a much bigger impact.

### After-words:

The observation of topographical such as the high and low of the area, together with the manoeuvring the 5-elements as well the matching of Yin and Yang should be used in flexibility manner. Again to emphasis the right measure of the house direction is critical first step. The ancient traditional houses vary from different walks of life. The higher end would have many rooms and many people to fit in. For the poor or lower end, the house is simply enough to fit smaller family. That is why the success of Feng Shui is how you create more people in the family.

To determine the right place is none other than finding the balance or equilibrium state, anything that is tilted towards one end is not good. Excessive, Destruction and Nurturing are three key words here for analysing the site Feng Shui.

### Example of Excessive:

When Metal is too much, rather than creating water, it would pollute the water.

When Water is too much, rather than nurturing wood, it would float the wood.

When Earth is too much, rather than nurturing metal, it would bury the metal.

When Wood is too much, rather than nurturing fire, it would halt the burning process.

When Fire is too much, rather than nurturing Earth, it would burnt the earth.
