

Early Signs of Earthquakes

According to official Sichuan spoke person the death toll in the huge quake in China's Sichuan province went above 50,000 Friday, May 23rd 2008, with 30,000 others still missing.

It is widely believed that Animals have strong senses and they get advance feeling before any disasters.

In China

The first sign came about three weeks ago, when a large volume of water suddenly disappeared from a pond in Enshi, Hubei province, around 350 miles east of the epicenter of the May 12 quake in Sichuan, according to media reports. Then, thousands of toads appeared on streets in a nearby province. Finally, just hours before China's worst earthquake in three decades, animals at a local zoo began acting strangely. Some went on hunger strike, some on abnormal behavior like screaming and jumping.

In Hong Kong

End of April 2008, three Hong Kong anglers thought they had hit the big time when they sold their rare giant fish for HK\$20,000 (\$2,560) -- but they missed out on a HK\$1 million bonanza, a newspaper reported on Friday. The 85-kg Chinese Bahaba, also known as a giant yellow croaker, is believed to be the largest caught in Hong Kong in 10 years, Hong Kong's Apple Daily newspaper reported. The fisherman subsequently sold the rare giant fish -- which is highly prized for its costly swim bladder or fish maw -- to a seafood restaurant for HK\$580,000.

In Taiwan

KENTING, Taiwan (29 Apr 2008) — All of the eight missing Taiwanese scuba divers were miraculously rescued yesterday after nearly 48 hours of drifting in the ocean offshore Taiwan's eastern county Taitung, said the local coast guard.

Drifted away-The group of divers had drifted over 100 kilometers at sea from the location where they were originally reported missing last Saturday, near Chihsingyen (Seven Star Rocks), 22 km southwest of the southernmost tip of Taiwan. The divers were promptly airlifted to Mackay Memorial Hospital in Taitung for treatment after they were rescued yesterday.

Professor Chu Tzu-how of the National Taiwan University said an unusual burst of radio waves - seen by some scientists as an early sign of big tremors - was detected prior to the Sichuan quake.

Most seismologists are skeptical about using animal behavior to predict earthquakes. Without conclusive studies, scientists would be wary of making predictions because errors bred skepticism and complacency among the public.

Hundred thousands of toads appeared on streets in Sichuan before the earthquake
